# EdPuzzle Activity Instruction

By Hua Lin

**Purpose:** EdPuzzle is a technology-based activity for any level of students practicing listening skills. Teacher needs to set up their own classes so they can send out the class join code to invite their students to join the right class. They can search any video from the internet or upload their own videos from their computer in order to create their lessons. Once the video is uploaded, the teacher can modify the video and embed various activities into the video.

**Tme:** 10 - 30 minutes depending on each lesson.

**Materials Needed:** Wifi, Electronic devices: Laptop, smartphone, Tablet, or iPad.

1. Search any video needed from the internet or upload it from the computer.
2. Modify the video. I only work on the segment I want.
3. Add activities into the video. I can record an audio question or add various question types(open-ended, Yes/No, multiple choice or simple notation).
4. Assign it to the right class and share the link to the students.
5. I can monitor the students' progress and check their answers to the questions.

**Modifications:**

The EdPuzzle activities can be done anytime and anywhere so they can be assigned as class activities or homeworks, depending on teacher's preferences. The students can also upload their own videos as their speaking assignments.
